Project Name	Laptop Request Process in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement:

Organizations often face challenges in managing employee laptop requests efficiently, especially when requests are handled through emails, paper forms, or manual communication. Employees experience delays in obtaining the required hardware due to lengthy approval procedures, lack of proper tracking, and inconsistent communication between managers and the IT department. These manual processes increase administrative effort, reduce operational efficiency, and make it difficult to monitor the status of each request.

In addition, the absence of an automated request management system limits visibility into the approval and fulfilment process. IT teams may receive incomplete request information, managers may overlook approval requests, and employees often remain unaware of the current status of their requests. These challenges highlight the need for a centralized, automated, and user-friendly solution that can streamline the entire laptop request lifecycle.

The proposed **Laptop Request Process** leverages the **ServiceNow** platform to automate the complete workflow of requesting, approving, and fulfilling laptop requests. Employees can submit their requests through the **Service Catalog** by selecting the required laptop type and providing a business justification. The system automatically routes the request to the appropriate manager for approval using **Flow Designer**, generates a **Catalog Task** for the IT Hardware team after approval, and sends an automated email notification to the requester once the laptop is provisioned. This solution reduces manual intervention, improves request tracking, enhances transparency, and ensures faster and more efficient delivery of IT assets.

 **I'm**

An employee who needs a laptop for official work but experiences delays in receiving it.

I'm trying to

Request a laptop through a simple and efficient system with minimal waiting time.

But

The existing process relies on manual emails and approvals, making it slow and difficult to track.

Because

There is no automated workflow for request submission, approval, fulfillment, and notifications.

Which makes me feel

Frustrated by the delays and lack of visibility. Using ServiceNow automation can make the process faster, transparent, and more efficient.
