**Solution Fit:**

The **Laptop Request Process** developed on the **ServiceNow** platform provides a centralized and automated solution to overcome the challenges of traditional laptop request management. The system enables employees to request corporate laptops through a user-friendly **Service Catalog** by selecting the required laptop type and providing a business justification.

The solution automatically captures the request details, creates the required request records, and initiates an approval workflow using **Flow Designer**. Once the request is submitted, it is automatically routed to the employee's manager for approval, eliminating manual email communication and reducing approval delays. After approval, the system automatically generates a **Catalog Task** for the IT Hardware team to provision and configure the requested laptop.

Additionally, the solution sends automated email notifications to the requester when the laptop request has been fulfilled, providing complete visibility into the request lifecycle. Administrators can efficiently monitor request records, approvals, fulfilment tasks, and workflow execution through the ServiceNow platform.

By automating the complete laptop request lifecycle, the solution minimizes manual effort, improves operational efficiency, enhances transparency, reduces processing time, and ensures a standardized and scalable hardware request management process across the organization.
