Project Name	Laptop Request Process in ServiceNow
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Traditional laptop request management relies on emails, paper forms, and manual approvals, resulting in delayed processing, lack of transparency, inefficient tracking, and increased administrative effort. The project aims to automate and streamline the entire laptop request lifecycle using ServiceNow.
2	Idea / Solution Description	Develop a Laptop Request Process using ServiceNow that enables employees to request laptops through the Service Catalog, select the required laptop type, provide a business justification, automatically route requests for manager approval using Flow Designer, generate Catalog Tasks for the IT Hardware team, and send automated email notifications upon completion.
3	Novelty / Uniqueness	The solution integrates Service Catalog, Catalog Variables, Flow Designer, Manager Approval Workflow, Automatic Catalog Task Generation, and Email Notifications into a single automated platform, providing an end-to-end hardware request management solution.
4	Social Impact / Customer Satisfaction	The solution reduces approval delays, minimizes manual effort, improves transparency, enables real-time request tracking, enhances employee productivity, and increases customer satisfaction by providing a faster and more efficient laptop request process.
5	Business Model (Operational Value)	The system helps organizations reduce operational costs by automating manual request handling, improving IT resource management, reducing processing time, and increasing overall organizational efficiency. It can also support future integration with IT Asset Management (ITAM), inventory management, and procurement systems.
6	Scalability of the Solution	The solution is built on the ServiceNow Cloud Platform and can easily scale to support thousands of employees, multiple departments, different hardware request types (laptops, desktops, monitors, accessories), advanced approval workflows, and future integrations with enterprise asset management and procurement applications.
